

**ATTACHMENT M – TMDLS IN THE SANTA CLARA RIVER WATERSHED MANAGEMENT AREA**

**I. SANTA CLARA RIVER NITROGEN COMPOUNDS TMDL**

- A. Permittees subject to the provisions below are identified in Attachment J, Tables J-3 and J-4.
- B. Permittees shall comply with the following water quality-based effluent limitations for discharges to Santa Clara River Reach 5 and Reach 3<sup>1</sup> as of the effective date of the Order:

Constituent	Effluent Limitations (mg/L)			
	Reach 5		Reach 3	
	30-day average	1-hour average	30-day average	1-hour average
Total Ammonia as Nitrogen (NH <sub>3</sub> -N)	1.75	5.2	2.0	4.2
Nitrate plus Nitrite as Nitrogen (NO <sub>2</sub> -N + NO <sub>3</sub> -N)	6.8	-	8.1	-

**II. TMDL FOR CHLORIDE IN THE SANTA CLARA RIVER, REACH 3**

- A. Permittees subject to the provisions below are identified in Attachment J, Tables J-3 and J-4.
- B. Permittees shall comply with the following water quality-based effluent limitation for discharges to Santa Clara River Reach 3 and its tributaries as of the effective date of the Order:

Constituent	Effluent Limitation Daily Maximum (mg/L)
Chloride	100

**III. UPPER SANTA CLARA RIVER CHLORIDE TMDL**

- A. Permittees subject to the provisions below are identified in Attachment J, Tables J-3 and J-4.
- B. Permittees shall comply with the following water quality-based effluent limitation for discharges to Santa Clara River Reaches 4B, 5, and 6 as of the effective date of the Order:

Constituent	Effluent Limitation Daily Maximum (mg/L)
Chloride	100

**IV. SANTA CLARA RIVER ESTUARY AND REACHES 3, 5, 6, AND 7 INDICATOR BACTERIA TMDL**

- A. Permittees subject to the provisions below are identified in Attachment J, Tables J-3 and J-4.
- B. The daily maximum single sample objectives for Santa Clara River Estuary, and Santa Clara River Reaches 1, 2, 3, and above are listed below:

<sup>1</sup> The Basin Plan Chapter 7-9 Santa Clara River Nitrogen Compounds TMDL uses the U.S. EPA Santa Clara River reach designations. Reach designations here are per the corresponding reach designations in the Los Angeles Region’s Basin Plan Chapter 2. The U.S. EPA’s Santa Clara River Reach 7 corresponds to Santa Clara River Reach 5 (Blue Cut Gauging Station to West Pier Highway 99) in the Los Angeles Region’s Basin Plan Chapter 2. Likewise, U.S. EPA’s Santa Clara River Reach 3 corresponds to part of Santa Clara River Reach 3 (between Freeman Diversion Dam near Saticoy to Timber Canyon above Santa Paula Creek) in the Los Angeles Region’s Basin Plan Chapter 2.

Constituent	Daily Maximum Single Sample Objectives (MPN or cfu)	
	Santa Clara River Estuary and Santa Clara River Reaches 1 and 2	Santa Clara River Reaches 3 and above
E. coli	--	235/100 mL
Total coliform	10,000/100 mL <sup>2</sup>	--
Fecal coliform	400/100 mL	--
Enterococcus	104/100 mL	--

C. Permittees shall comply with the following interim receiving water limitations and water quality-based effluent limitations<sup>3</sup> for discharges to the Santa Clara River Estuary and Santa Clara River Reaches 1, 2, 3, and above as of the effective date of the Order<sup>4</sup>:

Location	Time Period	Interim Annual Allowable Exceedance Days of the Single Sample Objectives <sup>5</sup>		
		Daily Sampling	Weekly Sampling	3 Wet and 2 Dry weather events
Santa Clara River Estuary and Santa Clara River Reaches 1 and 2	Winter Dry Weather (November 1 to March 31)	49	7	1
	Summer Dry Weather (April 1 to October 31)	150	22	1
	Wet Weather (November 1 to October 31)	62	9	1
Santa Clara River Reaches 3 and above	Dry Weather (November 1 to October 31)	17	3	1
	Wet Weather (November 1 to October 31)	61	9	1

D. Permittees shall comply with the following final receiving water limitations and water quality-based effluent limitations<sup>6</sup> for discharges to the Santa Clara River Estuary and Santa Clara River Reaches 1, 2, 3, and above during dry weather no later than March 21, 2023, and during wet weather no later than March 21, 2029:

Location	Time Period	Final Annual Allowable Exceedance Days of the Single Sample Objectives <sup>7</sup>	
		Daily Sampling	Weekly Sampling
Santa Clara River Estuary and Santa Clara River Reaches 1 and 2	Winter Dry Weather (November 1 to March 31)	12	2
	Summer Dry Weather (April 1 to October 31)	10	2
	Wet Weather	25	4

<sup>2</sup> Total coliform density shall not exceed the daily maximum of 1,000/100 mL, if the ratio of fecal-to-total coliform exceeds 0.1.  
<sup>3</sup> The receiving water limitations are group-based and shared among all MS4 Permittees in the Order located within the sub-drainage area to each reach.  
<sup>4</sup> Wet weather is defined as a day with 0.1 inch of rain or greater and the three days following the rain event. Dry weather is defined as a non-wet day.  
<sup>5</sup> The Single Sample Objectives are equivalent to the daily maximum values listed in subpart B above.  
<sup>6</sup> The receiving water limitations are group-based and shared among all MS4 Permittees in the Order located within the sub-drainage area to each reach.  
<sup>7</sup> The Single Sample Objectives are equivalent to the daily maximum values listed in subpart B above.

Location	Time Period	Final Annual Allowable Exceedance Days of the Single Sample Objectives <sup>7</sup>	
		Daily Sampling	Weekly Sampling
	(November 1 to October 31)		
Santa Clara River Reaches 3 and above	Dry Weather (November 1 to October 31)	5	1
	Wet Weather (November 1 to October 31)	16	3

E. Permittees shall comply with the following receiving water limitations and water quality-based effluent limitations for discharges to the Santa Clara River Estuary and Santa Clara River Reaches 1, 2, 3, and above no later than March 21, 2029:

Constituent	Rolling 30-day Geometric Mean (MPN or cfu) <sup>8</sup>	
	Santa Clara River Estuary and Santa Clara River Reaches 1 and 2	Santa Clara River Reaches 3 and above
E. coli	---	126/100 mL
Total coliform	1,000/100mL	---
Fecal coliform	200/100mL	---
Enterococcus	35/100mL	---

F. Permittees may propose wet-weather load-based compliance at MS4 outfalls. The plan shall include the following:

1. An estimate of existing load and the allowable load from MS4 outfalls to attain the allowable number of exceedance days in-stream; and
2. Technically defensible quantitative linkage to the allowable number of exceedance days; and
3. Quantitative estimates of the water quality benefits provided by the proposed implementation approach.

**V. LAKE ELIZABETH, MUNZ LAKE, AND LAKE HUGHES TRASH TMDL (LAKE ELIZABETH ONLY)**

- A. Permittees subject to the provisions below are identified in Attachment J, Tables J-3 and J-4.
- B. Permittees shall comply with water quality-based effluent limitations for trash per the provisions in Part IV.B.3 of the Order.
- C. Permittees shall comply with the water quality-based effluent limitation of zero trash discharged to Lake Elizabeth and its shoreline as of the effective date of the Order and every water year thereafter.

**VI. SANTA CLARA RIVER LAKES NUTRIENTS TMDL (LAKE ELIZABETH ONLY)**

- A. Permittees subject to the provisions below are identified in Attachment J, Tables J-3 and J-4.

<sup>8</sup> Geometric mean values shall be calculated on each sample day based on a statistically sufficient number of samples (generally not less than 5 samples equally spaced over a 30-day period) consistent with the REC-1 bacteria objectives.

- B.** Permittees<sup>9</sup> shall comply with the following mass-based water quality-based effluent limitations<sup>10</sup> for discharges of total nitrogen and total phosphorus to Lake Elizabeth no later than June 27, 2032:

<b>Effluent Limitations</b>	
<b>Total Phosphorus (lb/yr)</b>	<b>Total Nitrogen<sup>11</sup> (lb/yr)</b>
436.7	2536.8

- C.** Compliance with subpart B above shall be determined based on monitoring at all outfalls directly discharging to Lake Elizabeth at a minimum of quarterly per year. Permittees shall report flow of discharge from the outfall in conjunction with reporting monitoring data.

---

<sup>9</sup> Responsible Permittees include County of Los Angeles and LACFCD.

<sup>10</sup> The water quality-based effluent limitations are group-based and shared among all MS4 Permittees in the Order located within the sub-drainage area to Lake Elizabeth.

<sup>11</sup> Total Nitrogen is the sum of TKN plus Nitrate-N plus Nitrite-N.
